Notes on Weighting

The dataset includes weights that allow researchers to approximate the population of investors<sup>1</sup> as a whole, based on the 2021 NFCS State-by-State Survey. The weighting variable (wgt1) is designed to weight the sample so that it is representative of the investor population in terms of the following characteristics:

- Age: 18-34  
35-54  
55+
- Education: Some college (including Associate's degree) or less  
College graduate (Bachelor's degree) or more

Note that the weighting is intended to produce a reliable representation of the investor population as a whole. However, breakdowns of sub-populations will not necessarily be representative.

No additional weighting was used to account for non-response bias.

Additional Variables

For convenience, this dataset also includes a small selection of demographic variables from the 2021 State-by-State Survey (gender, age, ethnicity, education, and income). Researchers who want to analyze the relationship between Investor Survey variables and other variables from the State-by-State Survey can use the NFCSID variable to match Investor Survey respondents to their answers in the State-by-State Survey.

---

<sup>1</sup> Defined as individuals with investments in non-retirement accounts. A majority of these respondents also have investments in retirement accounts, however retirement investments are not specifically addressed in the Investor Survey.
